C++

1. WAP to abstract some attributes of class Admin to prevent them to be inherited by its child classes.
   - Class Admin -> Class Manager
   - Class Manager -> Class Employee
   - Class Admin has following members:
     - company_name
     - manager_salary
     - employee_salary
     - total_staff
     - total_annual_revenue
     - can_terminate
   - use all attributes accessibility in parent class and child class properly.
   - override a method myAccess() in both child classes to display all parent class's members value accordingly.
